- Is the code functional:
    - Are there instructions to setup/install?
    - Does it meet the minimum requirements in the specification?
    - Does it return appropriate results in other circumstances?
- Is the code readable:
    - Sensible naming of variables and methods?
    - Sensible method sizes (<20 lines)?
    - Low complexity methods?
- Is the code tested:
    - Units tests for at least major classes?
    - End to end functional or integration tests?
- Is the design sound:
    - Is it object oriented?
    - Does it follow the Single Responsibility Principle?
    - Does if follow the Law of Demeter?
